

An astounding quantity of information relevant to understanding and evaluating climate risks and climate solutions is available today for anyone with the time and opportunity to look for it. But decision-makers at all levels face an “information paradox” in which they are “drowning in information but starved for knowledge.” Therefore, we need to explore ways of getting the “right” information to the “right” decision-maker at the “right” time. Knowledge management tools can help deliver that “actionable climate knowledge,” and [the Climatographers](#) have been developing such tools for more than a decade. **Your Climate Change Toolbox** is a new tool intended for **anyone** interested in or concerned about the Earth’s changing climate.

This page displays some of the more than 100 Dashboards making up **Your Climate Change Toolbox** to provide a rapid sense of the scope and depth of the **Toolbox**. Click on the links to access the Dashboards on-line. As with any toolbox, different Dashboards serve different purposes, and each can stand alone in serving that purpose, and new and better tools are always being added.
